

## DevOps Engineer

### Minimum Qualifications:

- 4+ years work experience in a DevOps or similar role.
- Fluency in one or more scripting languages (Python, bash etc).
- Expertise in overall areas in DevOps including CI/CD with build & release, Internal tooling, and production operations.
- Hands-on experience with Linux, Docker and AWS

### Preferred Qualifications:

- Experience with orchestration services like Docker Swarm, Kubernetes, Terraform, and Ansible
- Understanding of fundamental network technologies like Load Balancing, SSL, TCP/IP, SNMP
- Understand cloud security and best practices
- Strong troubleshooting skills

### About the Job

We're looking for a DevOps engineer who can bring in fresh ideas around automating CI/CD pipeline, improving scalability and reliability of our product.

In this role:

- You will help to improve the CI/CD pipeline
- You will be responsible for maintaining customer deployments and onboarding new customers
- You will work closely with developers to resolve any integration/production environment issues
- Your goal will be to automate everything possible
- You will build tools around orchestration and monitoring of our microservices based architecture
- You will also wear a Tier1 support engineer hat

### About Augtera

The network has been waiting 25 years for the future to arrive. At Augtera, we're for game-altering AI and machine learning that acts as a launchpad for your people, your ideas and your enterprise. The unique ability to analyze every signal from every source reveals entirely new patterns and insights ready for action. Teams are freed up to perform at their highest level — to invent new products, richer customer experiences and digital applications. On a foundational level, the network is the enterprise. So when down-time is way down and operational costs shrink, then performance and productivity ripple across the organization. It's time for the first purpose built network AI for the modern enterprise.
