- Experienced in Front-End Engineering Operations
- Collaborate with Design Teams across various time zones

### Preferred Qualifications:

- Master’s Degree in Computer Science or Transdisciplinary Design
- Experience designing and developing web-based platforms

## **About the Job**

Augtera’s software developers are building the enterprise network’s first AI platform that is changing the way large scale networks are managed and deployed. Our product needs to handle information at a massive scale. We’re looking for software developers who bring fresh ideas from all areas, including distributed computing, large-scale system design, networking and data storage, artificial intelligence, UI design and real time systems.

As a software developer, you will design and implement software in specific areas of Augtera’s AI platform and will have opportunities to learn and grow in multiple areas.

## **About Augtera**

The network has been waiting 25 years for the future to arrive. At Augtera, we’re for game-altering AI and machine learning that acts as a launchpad for your people, your ideas and your enterprise. The unique ability to analyze every signal from every source reveals entirely new patterns and insights ready for action. Teams are freed up to perform at their highest level — to invent new products, richer customer experiences and digital applications. On a foundational level, the network is the enterprise. So when down-time is way down and operational costs shrink, then performance and productivity ripple across the organization. It’s time for the first purpose built network AI for the modern enterprise.
